AUTON'HOME CO LTD

In our modern life and within this new digital era of a connected world, a house is no more unique because you have personalized it with specific furniture, wall colours or some photos and pictures of you and your family bringing back enjoyable memories...

A **House** become a **Home**, when it starts to responds to YOUR specific needs and adjust itself or react based on YOUR daily routine!

This is where Smart Home technologies fill the gap, as the technology is going to work for YOU, providing you a total personalized living experience. Whether it is to improve your daily comfort, or for security purpose or even to save energy, Smart Homes are defined by the users themselves.
